

Holliday Utility Services provides coatings for Metal and Concrete.

The inside and outside of metal tanks, metal parts within clarifiers or other process units, or any other metal needs which require coatings.

On Concrete, sealants and multi-component mixtures can be applied.

In many applications on Manholes and Wetwells the multi-component mixtures are chosen where a high degree of Hydrogen Sulfide Protection is required.

Where required we can apply NSF approved or other products.

Pumps and Piping after stripping, priming, and repainting

Coatings Applied to Manholes, Tanks, Pits, Wet Wells
