

Holliday Utility Services performs High Pressure Chemical Injection Grouting. We offer Hydro-phobic, and Hydro-phyllic grouts. These chemical grouts can expand from 5 to 30 times depending on the material selected. By pumping in under pressure as opposed to using a cartridge system, the grouts will bind for a long life. These grouts fill in voids, stay flexible for years, permanently seals leaks, forms a waterproof curtain around the outside of the structure.

Holliday Utility Services offers additional solutions for leaks in addition to High Pressure Chemical Injections Groutings.

Let us review your needs, and make the best repair recommendation.

Stop paying to treat inflow and infiltration through leaks in manhole and other structures. Gain back treatment capacity while reducing construction cost.

Repiar the integrity of tanks stopping leaks, permanently.

Cracks, improperly installed or failed joint seals, settling and mislignment can all create entry for groundwater infiltration, reducing valuable system capacity.

Crack in Tank Floor Prior to Repair - over 100,000
gpd of Water Lost Through Crack

Repair Made to Bridge Crack and Cover with a Patch
- No More Evidence of Water Loss

Leaks Through the Walls of a Pump Station Prior to High Pressure Chemical Injection Grouting

Pump Station Leak Stopped by High Pressure Chemical Injection Grouting
